

ANANT GOEL

Delhi, India

+91 99716 49876 goel.anant2006@gmail.com linkedin.com/in/anant-goel github.com/Anant-Goel2006

PROFESSIONAL SUMMARY

Data Analyst and Data Science undergraduate with hands-on experience in Python, SQL, and data analytics. Skilled in data cleaning, exploratory analysis, and building analytical models to generate actionable insights. Completed analytics and machine learning projects and driven to apply data-driven problem solving in real-world business contexts.

EDUCATION

Bachelor of Technology (B.Tech) in CSE with specialization in Data Science

K.R. Mangalam University, Gurgaon — **SGPA: 8.67/10.0** — Dean's List Recipient

Gurgaon, Haryana

TECHNICAL SKILLS

Programming Languages: Python, SQL, R, Git/GitHub

Data Analysis & Statistics: Data Cleaning, Exploratory Data Analysis (EDA), Hypothesis Testing, Regression, Statistical Inference

Machine Learning & Modeling: Scikit-learn, Predictive Modeling, Classification, Feature Engineering, Model Evaluation

Data Visualization & BI Tools: Power BI, Tableau, Matplotlib, Seaborn, Data Storytelling

Tools & Platforms: Jupyter Notebook, Microsoft Excel (Pivot Tables, VLOOKUP), MySQL

Professional Skills: Critical Thinking, Communication, Data Interpretation, Problem Solving, Analytical Thinking

WORK EXPERIENCE

MedTourEasy

Jul 2025

Data Analyst Trainee

Remote

- Analyzed and cleaned real-world healthcare and patient records using Python and SQL for data quality improvement
- Performed exploratory data analysis (EDA) and statistical evaluation to derive actionable insights from healthcare datasets
- Built interactive KPI dashboards to track key performance metrics and support operational decision-making processes
- Communicated data-driven insights to stakeholders to assist in process optimization and efficiency improvements

PROJECTS

NeuroLab – Neural Network Lab Toolbox | Deep Learning, Python, Streamlit

- Built a premium interactive simulation suite with 7 neural network modules including Perceptron, Forward/Backward Propagation, Hopfield Networks, OpenCV Detection Hub, Sentiment Analysis, and LSTM Applications
- Implemented YOLOv8-powered vehicle detection, MediaPipe hand gesture control, 8-emotion LSTM sentiment classifier, and an AI-driven story generation module within a single unified application

AirPulse – Real-Time Air Quality Monitor | Full-Stack Development, Machine Learning, Flask

- Built a full-stack AQI dashboard serving live air quality data for 150+ cities worldwide using WAQI API integration, deployed on Render with an interactive Leaflet map and 24-hour pollution heatmap
- Trained a Random Forest ML model (scikit-learn) to predict AQI from pollutant inputs and integrated an AI-powered health guidance chatbot providing time-of-day-aware advice for asthma patients and sensitive groups
- Architected a modular Flask backend with RESTful API endpoints, city ranking analytics, historical trend tracking, and geolocation-based nearest-station lookup; stack: Python, Flask, Chart.js, Leaflet.js, Pandas

Netflix Content Analytics Dashboard | Power BI, Data Visualization, DAX

- Designed an interactive Power BI dashboard analyzing 8,809 Netflix titles across ratings, genres, countries, and years (2008–2021) using donut charts, area charts, maps, and ranked bar charts
- Developed DAX calculated measures and Power Query transformations to build KPIs covering total directors (4,527), genre count (515), Movies vs. TV Show split, and year-over-year content growth trends
- Derived key insights including movies comprising ~70% of the library, rapid content expansion post-2016, US as top producer, and Drama/International as leading genres to support strategic content decisions
